Introduction to the Integral Approach (and the AQAL Map)

During the last 30 years, we have witnessed a historical first: all of the world’s cultures are now available to us. In the past, if you were born, say, a Chinese, you likely spent your entire life in one culture, often in one province, sometimes in one house, living and loving and dying on one small plot of land. But today, not only are people geographically mobile, but we can study, and have studied, virtually every known culture on the planet. In the global village, all cultures are exposed to each other.

Knowledge itself is now global. This means that, also for the first time, the sum total of human knowledge is available to us—the knowledge, experience, wisdom, and reflection of all major human civilizations—premodern, modern, and postmodern—are open to study by anyone.

What if we took literally everything that all the various cultures have to tell us about human potential—about spiritual growth, psychological growth, social growth—and put it all on the table? What if we attempted to find the critically essential keys to human growth, based on the sum total of human knowledge now open to us? What if we attempted, based on extensive cross-cultural study, to use all of the world’s great traditions to create a composite map, a comprehensive map, an all-inclusive or integral map that included the best elements from all of them?

Sound complicated, complex, daunting? In a sense, it is. But in another sense, the results turn out to be surprisingly simple and elegant. Over the last several decades, there has indeed been an extensive search for a comprehensive map of human potentials. This map uses all the known systems and models of human growth—from the ancient
shamans and sages to today’s breakthroughs in cognitive science—and distills their major components into 5 simple factors, factors that are the essential elements or keys to unlocking and facilitating human evolution.

Welcome to the Integral Approach.

**An Integral or Comprehensive Map**

What are these 5 elements? We call them **quadrants, levels, lines, states, and types**. As you will see, all of these elements are, right now, *available in your own awareness*. These 5 elements are not merely theoretical concepts; they are aspects of your own experience, contours of your own consciousness, as you can easily verify for yourself as we proceed.

What is the point of using this Integral Map? First, whether you are working in business, medicine, psychotherapy, law, ecology, or simply everyday living and learning, the Integral Map helps make sure that you are “touching all the bases.” If you are trying to fly over the Rocky Mountains, the more accurate a map you have, the less likely you will crash. An Integral Approach ensures that you are utilizing the full range of resources for any situation, with the greater likelihood of success.

Second, if you learn to spot these 5 elements in your own awareness—and because they are there in any event—then you can more easily appreciate them, exercise them, use them. . . and thereby vastly accelerate your own growth and development to higher, wider, deeper ways of being. A simple familiarity with the 5 elements in the Integral Model will help you orient yourself more easily and fully in this exciting journey of discovery and awakening.
In short, the Integral Approach helps you see both yourself and the world around you in more comprehensive and effective ways. But one thing is important to realize from the start. The Integral Map is just a map. It is not the territory. We certainly don’t want to confuse the map with the territory—but neither do we want to be working with an inaccurate or faulty map. Do you want to fly over the Rockies with a bad map? The Integral Map is just a map, but it is the most complete and accurate map we have at this time.

What Is an IOS?

IOS simply means Integral Operating System. In an information network, an operating system is the infrastructure that allows various software programs to operate. We use Integral Operating System or IOS as another phrase for the Integral Map. The point is simply that, if you are running any “software” in your life—such as your business, work, play, or relationships—you want the best operating system you can find, and IOS fits that bill. In touching all the bases, it allows the most effective programs to be used. This is just another way of talking about the comprehensive and inclusive nature of the Integral Model.

We will also be exploring what is perhaps the most important use of the Integral Map or Operating System. Because an IOS can be used to help index any activity—from art to dance to business to psychology to politics to ecology to spirituality—it allows each of those domains to talk to the others. Using IOS, business has the terminology with which to communicate fully with ecology, which can communicate with art, which can
communicate with law, which can communicate with poetry and education and medicine and spirituality. In the history of humankind, this has never really happened before.

By using the Integral Approach—by using an Integral Map or Integral Operating System—we are able to facilitate and dramatically accelerate cross-disciplinary and trans-disciplinary knowledge, thus creating the world’s first truly integral learning community. And when it comes to religion and spirituality, using the Integral Approach has allowed the creation of Integral Spiritual Center, where some of the world’s leading spiritual teachers from all major religions have come together not only to listen to each other but to “teach the teachers,” resulting in one of the most extraordinary learning events imaginable. We will return to this important gathering, and ways you can join in this community if you wish.

But it all starts with these simple 5 elements in the contours of your own consciousness.

**States of Consciousness**

We said that all of the aspects of the 5 elements of the Integral Model are available, right now, in your own awareness. What follows is therefore, in a sense, a guided tour of your own experience. So why don’t you come along and see if you can spot some of these features arising in your own awareness right now.

Some of these features refer to subjective realities in you, some refer to objective realities out there in the world, and others refer to collective or communal realities shared with others. Let’s start with states of consciousness, which refer to subjective realities.
Everybody is familiar with major states of consciousness, such as waking, dreaming, and deep sleep. Right now, you are in a waking state of consciousness (or, if you are tired, perhaps a daydream state of consciousness). There are all sorts of different states of consciousness, including meditative states (induced by yoga, contemplative prayer, meditation, and so on), altered states (such as drug-induced), and a variety of peak experiences, many of which can be triggered by intense experiences like making love, walking in nature, or listening to exquisite music.

The great wisdom traditions (such as Christian mysticism, Vedanta Hinduism, Vajrayana Buddhism, and Jewish Kabbalah) maintain that the 3 natural states of consciousness—waking, dreaming, and deep formless sleep—actually contain a treasure trove of spiritual wisdom and spiritual awakening . . . if we know how to use them correctly. We usually think of the dream state as less real, but what if you could enter it while awake? And the same with deep sleep? Might you learn something extraordinary in those awakened states? How do you know for sure without trying it? In a special sense, which we will explore as we go along, the 3 great natural states of waking, dreaming, and deep sleep might contain an entire spectrum of spiritual enlightenment.

But on a much simpler, more mundane level, everybody experiences various states of consciousness, and these states often provide profound motivation, meaning, and drives, in both yourself and others. In any particular situation, states of consciousness may not be a very important factor, or they may be the determining factor, but no integral approach can afford to ignore them. Whenever you are using IOS, you will automatically be prompted to check and see if you are touching bases with these important subjective
realities. This is an example of how a map—in this case, the IOS or Integral Map—can help you look for territory you might not have even suspected was there. . . .

**Stages or Levels of Development**

There’s an interesting thing about states of consciousness: they come and they go. Even great peak experiences or altered states, no matter how profound, will come, stay a bit, then pass. No matter how wonderful their capacities, they are temporary.

Where states of consciousness are temporary, stages of consciousness are permanent. Stages represent the actual milestones of growth and development. Once you are at a stage, it is an enduring acquisition. For example, once a child develops through the linguistic stages of development, the child has permanent access to language. Language isn’t present one minute and gone the next. The same thing happens with other types of growth. Once you stably reach a stage of growth and development, you can access the capacities of that stage—such as greater consciousness, more embracing love, higher ethical callings, greater intelligence and awareness—virtually any time you want. Passing states have been converted to permanent traits.

How many stages of development are there? Well, remember that in any map, the way you divide and represent the actual territory is somewhat arbitrary. For example, how many degrees are there between freezing and boiling water? If you use a Centigrade scale or “map,” there are 100 degrees between freezing and boiling. But if you use a Fahrenheit scale, freezing is at 32 and boiling is at 212, so there are 180 degrees between them. Which is right? Both of them. It just depends upon how you want to slice that pie.
The same is true of stages. There are all sorts of ways to slice and dice development, and therefore there are all sorts of stage conceptions. All of them can be useful. In the chakra system, for example, there are 7 major stages or levels of consciousness. Jean Gebser, the famous anthropologist, uses 5: archaic, magic, mythic, rational, and integral. Certain Western psychological models have 8, 12, or more levels of development. Which is right? All of them; it just depends on what you want to keep track of in growth and development.

“Stages of development” are also referred to as “levels of development,” the idea being that each stage represents a level of organization or a level of complexity. For example, in the sequence from atoms to molecules to cells to organisms, each of those stages of evolution involves a greater level of complexity. The word “level” is not meant in a rigid or exclusionary fashion, but simply to indicate that there are important emergent qualities that tend to come into being in a discrete or quantum-like fashion, and these developmental jumps or levels are important aspects of many natural phenomena.

Generally, in the Integral Model, we work with around 8 to 10 stages or levels of consciousness development. We have found, after years of field work, that more stages than that are too cumbersome, and less than that, too vague. Some of the stage conceptions we often use include those of self development pioneered by Jane Loevinger and Susann Cook-Greuter; Spiral Dynamics, by Don Beck and Chris Cowan; and orders of consciousness, researched by Robert Kegan. But there are many other useful stage conceptions available with the Integral Approach, and you can adopt any of them that are appropriate to your situation.
As we get into the specifics later in this book, you will see how incredibly important stages can be. But let’s take a simple example now to show what is involved.

**Egocentric, Ethnocentric, and Worldcentric**

To show what is involved with levels or stages, let’s use a very simple model possessing only 3 of them. If we look at moral development, for example, we find that an infant at birth has not yet been socialized into the culture’s ethics and conventions; this is called the **preconventional stage**. It is also called **egocentric**, in that the infant’s awareness is largely self-absorbed. But as the young child begins to learn its culture’s rules and norms, it grows into the **conventional stage** of morals. This stage is also called **ethnocentric**, in that it centers on the child’s particular group, tribe, clan, or nation, and it therefore tends to exclude those not of one’s group. But at the next major stage of moral development, the **postconventional stage**, the individual’s identity expands once again, this time to include a care and concern for all peoples, regardless of race, color, sex, or creed, which is why this stage is also called **worldcentric**.

Thus, moral development tends to move from “me” (egocentric) to “us” (ethnocentric) to “all of us” (worldcentric)—a good example of the unfolding stages of consciousness.

Another way to picture these 3 stages is as **body**, **mind**, and **spirit**. Those words all have many valid meanings, but when used specifically to refer to stages, they mean:
Stage 1, which is dominated by my gross physical reality, is the “body” stage (using body in its typical meaning of physical body). Since you are identified merely with the separate bodily organism and its survival drives, this is also the “me” stage.

Stage 2 is the “mind” stage, where identity expands from the isolated gross body and starts to share relationships with many others, based perhaps on shared values, mutual interests, common ideals, or shared dreams. Because I can use the mind to take the role of others—to put myself in their shoes and feel what it is like to be them—my identity expands from “me” to “us” (the move from egocentric to ethnocentric).

With stage 3, my identity expands once again, this time from an identity with “us” to an identity with “all of us” (the move from ethnocentric to worldcentric). Here I begin to understand that, in addition to the wonderful diversity of humans and cultures, there are also similarities and shared commonalities. Discovering the commonwealth of all beings is the move from ethnocentric to worldcentric, and is “spiritual” in the sense of things common to all sentient beings.

That is one way to view the unfolding from body to mind to spirit, where each of them is considered as a stage, wave, or level of unfolding care and consciousness, moving from egocentric to ethnocentric to worldcentric.

We will be returning to stages of evolution and development, each time exploring them from a new angle. For now, all that is required is an understanding that by “stages” we mean progressive and permanent milestones along the evolutionary path of your own unfolding. Whether we talk stages of consciousness, stages of energy, stages of culture, stages of spiritual realization, stages of moral development, and so on, we are talking of
these important and fundamental rungs in the unfolding of your higher, deeper, wider potentials.

Whenever you use IOS, you will automatically be prompted to check and see if you have included the important stage aspects of any situation, which will dramatically increase your likelihood of success, whether that success be measured in terms of personal transformation, social change, excellence in business, care for others, or simple satisfaction in life.

**Lines of Development: I’m Good at Some Things, Not-So-Good at Others . . .**

Have you ever noticed how unevenly developed virtually all of us are? Some people are highly developed in, say, logical thinking, but poorly developed in emotional feelings. Some people have highly advanced cognitive development (they’re very smart) but poor moral development (they’re mean and ruthless). Some people excel in emotional intelligence, but can’t add 2 plus 2.

Howard Gardner made this concept fairly well known using the idea of multiple intelligences. Human beings have a variety of intelligences, such as cognitive intelligence, emotional intelligence, musical intelligence, kinesthetic intelligence, and so on. Most people excel in one or two of those, but do poorly in the others. This is not necessarily or even usually a bad thing; part of integral wisdom is finding where one excels and thus where one can best offer the world one’s deepest gifts.

But this does mean that we need to be aware of our strengths (or the intelligences with which we can shine) as well as our weaknesses (where we do poorly or even
pathologically). And this brings us to another of our 5 essential elements: our multiples intelligences or developmental lines. So far we have looked at states and stages; what are lines or multiple intelligences?

Various multiple intelligences include: cognitive, interpersonal, moral, emotional, and aesthetic. Why do we also call them developmental lines? Because those intelligences show growth and development. They unfold in progressive stages. What are those progressive stages? The stages we just outlined.

In other words, each multiple intelligence grows—or can grow—through the 3 major stages (or through any of the stages of any of the developmental models, whether 3 stages, 5 stages, 7 or more; remember, these are all like Centigrade and Fahrenheit). You can have cognitive development to stage 1, to stage 2, and to stage 3, for example.

Likewise with the other intelligences. Emotional development to stage 1 means that you have developed the capacity for emotions centering on “me,” especially the emotions and drives of hunger, survival, and self-protection. If you continue to grow emotionally from stage 1 to stage 2—or from egocentric to ethnocentric—you will expand from “me” to “us,” and begin to develop emotional commitments and attachments to loved ones, members of your family, close friends, perhaps your whole tribe or whole nation. If you grow into stage-3 emotions, you will develop the further capacity for a care and compassion that reaches beyond your own tribe or nation and attempts to include all human beings and even all sentient beings in a worldcentric care and compassion.

And remember, because these are stages, you have attained them in a permanent fashion. Before that happens, any of these capacities will be merely passing states: you
will plug into some of them, if at all, in a temporary fashion—great peak experiences of expanded knowing and being, wondrous “aha!” experiences, profound altered glimpses into your own higher possibilities. But with practice, you will convert those states into stages, or permanent traits in the territory of you.

**The Integral Psychograph**

There is a fairly easy way to represent these intelligences or multiple lines. In figure 1, we have drawn a simple graph showing the 3 major stages (or levels of development) and 5 of the most important intelligences (or lines of development). **Through the major stages or levels of development, the various lines unfold.** The 3 levels or stages can apply to any developmental line—sexual, cognitive, spiritual, emotional, moral, and so on. The level of a particular line simply means the “altitude” of that line in terms of its growth and consciousness. We often say, “That person is highly developed morally,” or “That person is really advanced spiritually.”

In figure 1, we have shown somebody who excels in cognitive development and is good at interpersonal development, but does poorly in moral and really poorly in emotional intelligence. Other individuals would, of course, have a different “psychograph.”

The **psychograph** helps to spot where your greatest potentials are. You very likely already know what you excel in and what you don’t. But part of the Integral Approach is learning to refine considerably this knowledge of your own contours, so that
you can more confidently deal with your own strengths and weaknesses as well as those of others.

Figure 1. *Psychograph*

The psychograph also helps us spot the ways that virtually all of us are unevenly developed, and thus helps prevent us from thinking that just because we are terrific in one area we must be terrific in all the others. In fact, usually the opposite. More than one leader, spiritual teacher, or politician has spectacularly crashed through lack of an understanding of these simple realities.

To be “integrally developed” does not mean that you have to excel in all the known intelligences, or that all of your lines have to be at level 3. But it does mean that you develop a very good sense of what your own psychograph is actually like, so that with a much more integral self-image you can plan your future development. For some
people, this will indeed mean strengthening certain intelligences that are so weak they are causing problems. For others, this will mean clearing up a serious problem or pathology in one line (such as the psychosexual). And for others, simply recognizing where their strengths and weaknesses lie, and planning accordingly. Using an integral map, we can scope out our own psychographs with more assurance.

Thus, to be “integrally informed” does not mean you have to master all lines of development, just be aware of them. If you then chose to remedy any unbalances, that is part of Integral Life Practice (ILP), which actually helps to increase levels of consciousness and development through an integrated approach.

Notice another very important point. In certain types of psychological and spiritual training, you can be introduced to a full spectrum of states of consciousness and bodily experiences right from the start—as a peak experience, meditative state, shamanic vision, altered state, and so on. The reason these peak experiences are possible is that many of the major states of consciousness (such as waking-gross, dreaming-subtle, and formless-causal) are ever-present possibilities. So you can very quickly be introduced to many higher states of consciousness.

You cannot, however, be introduced to all the qualities of higher stages without actual growth and practice. You can have a peak experience of higher states (like seeing an interior subtle light or having a feeling of oneness with all of nature), because many states are ever-present, and so they can be “peek”-experienced right now. But you cannot have a peak experience of a higher stage (like being a concert-level pianist), because stages unfold sequentially and take considerable time to develop. Stages build upon their predecessors in very concrete ways, so they cannot be skipped: like atoms to molecules to
cells to organisms, you can’t go from atoms to cells and skip molecules. This is one of the many important differences between states and stages.

However, with repeated practice of contacting higher states, your own stages of development will tend to unfold in a much faster and easier way. There is, in fact, considerable experimental evidence demonstrating exactly that. The more you are plunged into authentic higher states of consciousness—such as meditative states—the faster you will grow and develop through any of the stages of consciousness. It is as if higher-states training acts as a lubricant on the spiral of development, helping you to disidentify with a lower stage so that the next higher stage can emerge, until you can stably remain at higher levels of awareness on an ongoing basis, whereupon a passing state has become a permanent trait. These types of higher-states training, such as meditation, are a part of any integral approach to transformation.

In short, you cannot skip actual stages, but you can accelerate your growth through them by using various types of state-practices, such as meditation, and these transformative practices are an important part of the Integral Approach.

**What Type: Boy or Girl?**

The next component is easy: each of the previous components has a masculine and feminine type.

There are two basic ideas here: one has to do with the idea of types themselves; and the other, with masculine and feminine as one example of types.
**Types** simply refers to items that can be present at virtually any stage or state. One common typology, for example, is the Myers-Briggs (whose main types are feeling, thinking, sensing, and intuiting). **You can be any of those types at virtually any stage of development.** These kind of “horizontal typologies” can be very useful, especially when combined with levels, lines, and states. To show what is involved, we can use “masculine” and “feminine.”

Carol Gilligan, in her enormously influential book *In a Different Voice*, pointed out that both men and women tend to develop through 3 or 4 major levels or stages of moral development. Pointing to a great deal of research evidence, Gilligan noted that these 3 or 4 moral stages can be called *preconventional, conventional, postconventional,* and *integrated.* These are actually quite similar to the 3 simple developmental stages we are using, this time applied to moral intelligence.

Gilligan found that stage 1 is a morality centered entirely on “me” (hence this preconventional stage or level is also called *egocentric*). Stage-2 moral development is centered on “us,” so that my identity has expanded from just me to include other human beings of my group (hence this conventional stage is often called *ethnocentric, traditional,* or conformist). With stage-3 moral development, my identity expands once again, this time from “us” to “all of us,” or all human beings (or even all sentient beings)—and hence this stage is often called *worldcentric.* I now have care and compassion, not just for me (egocentric), and not just for my family, my tribe, or my nation (ethnocentric), but for all of humanity, for all men and women everywhere, regardless of race, color, sex, or creed (worldcentric). And if I develop even further, at stage-4 moral development, which Gilligan calls *integrated,* then . . .
Well, before we look at the important conclusion of Gilligan’s work, let’s first note her major contribution. Gilligan strongly agreed that women, like men, develop through those 3 or 4 major hierarchical stages of growth. Gilligan herself correctly refers to these stages as *hierarchical* because each stage has a *higher* capacity for care and compassion. But she said that women progress through those stages using a different type of logic—they develop “in a different voice.”

Male logic, or a man’s voice, tends to be based on terms of autonomy, justice, and rights; whereas women’s logic or voice tends to be based on terms of relationship, care, and responsibility. Men tend toward agency; women tend toward communion. Men follow rules; women follow connections. Men look; women touch. Men tend toward individualism, women toward relationship. One of Gilligan’s favorite stories: A little boy and girl are playing. The boy says, “Let’s play pirates!” The girl says, “Let’s play like we live next door to each other.” Boy: “No, I want to play pirates!” “Okay, you play the pirate who lives next door.”

Little boys don’t like girls around when they are playing games like baseball, because the two voices clash badly, and often hilariously. Some boys are playing baseball, a kid takes his third strike and is out, so he starts to cry. The other boys stand unmoved until the kid stops crying; after all, a rule is a rule, and the rule is: three strikes and you’re out. Gilligan points out that if a girl is around, she will usually say, “Ah, come on, give him another try!” The girl sees him crying and wants to help, wants to connect, wants to heal. This, however, drives the boys nuts, who are doing this game as an initiation into the world of rules and male logic. Gilligan says that the boys will therefore
hurt feelings in order to save the rules; the girls will break the rules in order to save the feelings.

In a different voice. Both the girls and boys will develop through the 3 or 4 developmental stages of moral growth (egocentric to ethnocentric to worldcentric to integrated), but they will do so in a different voice, using a different logic. Gilligan specifically calls these hierarchical stages in women selfish (which is egocentric), care (which is ethnocentric), universal care (which is worldcentric), and integrated. Again, why did Gilligan (who has been badly misunderstood on this topic) say that these stages were hierarchical? Because each stage has a higher capacity for care and compassion. (Not all hierarchies are bad, and this a good example of why.)

So, integrated or stage 4—what is that? At the 4th and highest stage of moral development that we are aware of, the masculine and feminine voices in each of us tend to become integrated, according to Gilligan. This does not mean that a person at this stage starts to lose the distinctions between masculine and feminine, and hence become a kind of bland, androgynous, asexual being. In fact, masculine and feminine dimensions might become more intensified. But it does mean the individuals start to befriend both the masculine and feminine modes in themselves, even if they characteristically act predominantly from one or the other.

Have you ever seen a caduceus (the symbol of the medical profession)? It’s a staff with two serpents crisscrossing it, and wings at the top of the staff (see fig. 2). The staff itself represents the central spinal column; where the serpents cross the staff represents the individual chakras moving up the spine from the lowest to the highest; and the two
serpents themselves represent solar and lunar (or masculine and feminine) energies *at each of the chakras.*

![Caduceus](image)

Figure 2. *Caduceus*

That’s the crucial point. The 7 chakras, which are simply a more complex version of the 3 simple levels or stages, represent 7 levels of consciousness and energy available to all human beings. (The first 3 chakras—food, sex, and power—are roughly stage 1; chakras 4 and 5—relational heart and communication—are basically stage 2; and chakras 6 and 7—psychic and spiritual—are the epitome of stage 3). The important point here is that, according to the traditions, each of those 7 levels has a masculine and feminine aspect, type, or “voice.” Neither masculine nor feminine is higher or better; they are two equivalent types at each of the levels of consciousness.

This means, for example, that with chakra 3 (the egocentric-power chakra), there is a masculine and feminine version of the same chakra: at that chakra-level, males tend toward power exercised autonomously (“My way or the highway!”), women tend toward
power exercised communally or socially (“Do it this way or I won’t talk to you”). And so on with the other major chakras, each of them having a solar and lunar, or masculine and feminine, dimension. Neither is more fundamental; neither can be ignored.

At the 7th chakra, however, notice that the masculine and feminine serpents both disappear into their ground or source. Masculine and feminine meet and unite at the crown—they literally become one. And that is what Gilligan found with her stage-4 moral development: the two voices in each person become integrated, so that there is a paradoxical union of autonomy and relationship, rights and responsibilities, agency and communion, wisdom and compassion, justice and mercy, masculine and feminine.

The important point is that whenever you use IOS, you are automatically checking any situation—in yourself, in others, in an organization, in a culture—and making sure that you include both the masculine and feminine types so as to be as comprehensive and inclusive as possible. If you believe that there are no major differences between masculine and feminine—or if you are suspicious of such differences—then that is fine, too, and you can treat them the same if you want. We are simply saying that, in either case, make sure you touch bases with both the masculine and feminine, however you view them.

But more than that, there are numerous other “horizontal typologies” that can be very helpful when part of a comprehensive IOS, and the Integral Approach draws on any or all of those typologies as appropriate. “Types” are as important as quadrants, levels, lines, and states.

Sick Boy, Sick Girl
There’s an interesting thing about types. You can have healthy and unhealthy versions of them. To say that somebody is caught in an unhealthy type is not a way to judge them but a way to understand and communicate more clearly and effectively with them.

For example, if each stage of development has a masculine and feminine dimension, each of those can be healthy or unhealthy, which we sometimes call “sick boy, sick girl.” This is simply another kind of horizontal typing, but one that can be extremely useful.

If the healthy masculine principle tends toward autonomy, strength, independence, and freedom, when that principle becomes unhealthy or pathological, all of those positive virtues either over- or underfire. There is not just autonomy, but alienation; not just strength, but domination; not just independence, but morbid fear of relationship and commitment; not just a drive toward freedom, but a drive to destroy. The unhealthy masculine principle does not transcend in freedom, but dominates in fear.

If the healthy feminine principle tends toward flowing, relationship, care, and compassion, the unhealthy feminine flounders in each of those. Instead of being in relationship, she becomes lost in relationship. Instead of a healthy self in communion with others, she loses her self altogether and is dominated by the relationships she is in. Not a connection, but a fusion; not a flow state, but a panic state; not a communion, but a meltdown. The unhealthy feminine principle does not find fullness in connection, but chaos in fusion.

Using IOS, you will find ways to identify both the healthy and unhealthy masculine and feminine dimensions operating in yourself and in others. But the important
point about this section is simple: various typologies have their usefulness in helping us to understand and communicate with others. And with any typology, there are healthy and unhealthy versions of a type. Pointing to an unhealthy type is not a way to judge people, but a way to understand and communicate with them more clearly and effectively.

**There’s Even Room for Many Bodies**

Let’s return now to states of consciousness in order to make a final point before bringing this all together in an integral conclusion.

States of consciousness do not hover in the air, dangling and disembodied. On the contrary, every mind has its body. For every state of consciousness, there is a felt energetic component, an embodied feeling, a concrete vehicle that provides the actual support for any state of awareness.

Let’s use a simple example from the wisdom traditions. Because each of us has the 3 great states of consciousness—waking, dreaming, and formless sleep—the wisdom traditions maintain that each of us likewise has 3 bodies, which are often called the **gross body**, the **subtle body**, and the **causal body**.

I have 3 bodies? Are you kidding me? Isn’t one body enough? But keep in mind a few things. For the wisdom traditions, a “body” simply means a mode of experience or energetic feeling. So there is coarse or gross experience, subtle or refined experience, and very subtle or causal experience. These are what philosophers would call “phenomenological realities,” or realities as they present themselves to our immediate
awareness. Right now, you have access to a gross body and its gross energy, a subtle body and its subtle energy, and a causal body and its causal energy.

What’s an example of these 3 bodies? Notice that, right now, you are in a *waking state* of awareness; as such, you are aware of your **gross body**—the physical, material, sensorimotor body. But when you dream at night, there is no gross physical body; it seems to have vanished. You are aware in the dream state, yet you don’t have a gross body of dense matter but a **subtle body** of light, energy, emotional feelings, fluid and flowing images. In the dream state, the mind and soul are set free to create as they please, to imagine vast worlds not tied to gross sensory realities but reaching out, almost magically, to touch other souls, other people and far-off places, wild and radiant images cascading to the rhythm of the heart’s desire. So what kind of body do you have in the dream? Well, a **subtle body** of feelings, images, even light. That’s what you feel like in the dream. And dreams are not “just illusion.” When somebody like Martin Luther King, Jr., says, “I have a dream,” that is a good example of tapping into the great potential of visionary dreaming, where the subtle body and mind are set free to soar to their highest possibilities.

As you pass from the *dream state* with its subtle body into the deep-sleep or *formless state*, even thoughts and images drop away, and there is only a vast emptiness, a formless expanse beyond any individual “I” or ego or self. The great wisdom traditions maintain that in this state—which might seem like merely a blank or nothingness—we are actually plunged into a vast formless realm, a great Emptiness or Ground of Being, an expanse of consciousness that seems almost infinite. Along with this almost infinite expanse of consciousness there is an almost infinite body or energy—the **causal body**,
the body of the finest, most subtle experience possible, a great formlessness out of which creative possibilities can arise.

Of course, many people do not experience that deep state in such a full fashion. But again, the traditions are unanimous that this formless state and its causal body can be entered in full awareness, whereupon they, too, yield their extraordinary potentials for growth and awareness.

The point, once again, is simply that whenever IOS is being utilized, it reminds us to check in with our waking-state realities, our subtle-state dreams and visions and innovative ideas, as well as our own open, formless ground of possibilities that is the source of so much creativity. The important point about the Integral Approach is that we want to touch bases with as many potentials as possible so as to miss nothing in terms of possible solutions, growth, and transformation.

**Consciousness and Complexity**

Perhaps 3 bodies are just too “far out”? Well, remember that these are phenomenological realities, or experiential realities, but there is a simpler, less far-out way to look at them, this time grounded in hard-headed science. It is this: *every level of interior consciousness is accompanied by a level of exterior physical complexity*. The greater the consciousness, the more complex the system housing it.

For example, in living organisms, the *reptilian brain stem* is accompanied by a rudimentary interior consciousness of basic drives such as food and hunger, physiological sensations, and sensorimotor actions (everything that we earlier called “gross,” or
centered on the “me”). By the time we get to the more complex mammalian limbic system, basic sensations have expanded and evolved to include quite sophisticated feelings, desires, emotional-sexual impulses and needs (hence the beginning of what we called subtle experience or the subtle body, which can expand from “me” to “us”). As evolution proceeds to even more complex physical structures, such as the triune brain with its neocortex, consciousness once again expands to a worldcentric awareness of “all of us” (and thus even begins to tap into what we called the causal body).

That is a very simple example of the fact that increasing interior consciousness is accompanied by increasing exterior complexity of the systems housing it. When using IOS, we often look at both the interior levels of consciousness and the corresponding exterior levels of physical complexity, since including both of them results in a much more balanced and inclusive approach. We will see exactly what this means in a moment.

And Now: How Do They All Fit Together?

IOS—and the Integral Model—would be merely a “heap” if it did not suggest a way that all of these various components are related. How do they all fit together? It’s one thing to simply lay all the pieces of the cross-cultural survey on the table and say, “They’re all important!,” and quite another to spot the patterns that actually connect all the pieces. Discovering the profound patterns that connect is a major accomplishment of the Integral Approach.

In this concluding section, we will briefly outline these patterns, all of which together are sometimes referred to as A-Q-A-L (pronounced ah-qwul), which is
shorthand for “all quadrants, all levels, all lines, all states, all types”—and those are simply the components that we have already outlined (except the quadrants, which we will get to momentarily). AQAL is just another term for IOS or the Integral Map, but one that is often used to specifically designate this particular approach.

At the beginning of this introduction, we said that all 5 components of the Integral Model were items that are available to your awareness right now, and this is true of the quadrants as well.

Did you ever notice that major languages have what are called 1st-person, 2nd-person, and 3rd-person pronouns? The 1st-person perspective refers to “the person who is speaking,” which includes pronouns like I, me, mine (in the singular) and we, us, ours (in the plural). The 2nd-person perspective refers to “the person who is spoken to,” which includes pronouns like you and yours. The 3rd-person perspective refers to “the person or thing being spoken about,” such as he, him, she, her, they, them, it, and its.

Thus, if I am speaking to you about my new car, “I” am 1st person, “you” are 2nd person, and the new car (or “it”) is 3rd person. Now, if you and I are talking and communicating, we will indicate this by using, for example, the word “we,” as in, “We understand each other.” “We” is technically 1st-person plural, but if you and I are communicating, then your 2nd person and my 1st person are part of this extraordinary “we.” Thus, 2nd person is sometimes indicated as “you/we,” or “thou/we,” or sometimes just “we.”

So we can therefore simplify 1st-, 2nd-, and 3rd-person as “I,” “we,” and “it.”

That all seems trivial, doesn’t it? Boring, maybe? So let’s try this. Instead of saying “I,” “we,” and “it,” what if we said the Beautiful, the Good, and the True? And
what if we said that the Beautiful, the Good, and the True are dimensions of your very
own being at each and every moment, including each and every level of growth and
development? And that through an integral practice, you can discover deeper and deeper
dimensions of your own Goodness, your own Truth, and your own Beauty?

Hmm, definitely more interesting. The Beautiful, the Good, and the True are
simply variations on 1st-, 2nd-, and 3rd-person pronouns found in all major languages, and
they are found in all major languages because Beauty, Truth, and Goodness are very real
dimensions of reality to which language has adapted. The 3rd person (or “it”) refers to
objective truth, which is best investigated by science. The 2nd person (or “you/we”) refers
to Goodness, or the ways that we—that you and I—treat each other, and whether we do
so with decency, honesty, and respect. In other words, basic morality. And 1st person
deals with the “I,” with self and self-expression, art and aesthetics, and the beauty that is
in the eye (or the “I”) of the beholder.

So the “I,” “we,” and “it” dimensions of experience really refer to art, morals,
and science. Or self, culture, and nature. Or the Beautiful, the Good, and the True.
(For some reason, philosophers always refer to those in this order: the Good, the True,
and the Beautiful. Which order do you prefer? Any order is fine.)

The point is that every event in the manifest world has all 3 of those dimensions.
You can look at any event from the point of view of the “I” (or how I personally see and
feel about the event); from the point of view of the “we” (how not just I but others see the
event); and as an “it” (or the objective facts of the event).
Thus, an integrally informed path will take all of those dimensions into account, and thus arrive at a more comprehensive and effective approach—in the “I” and the “we” and the “it”—or in self and culture and nature.

If you leave out science, or leave out art, or leave out morals, something is going to be missing, something will get broken. Self and culture and nature are liberated together or not at all. So fundamental are these dimensions of “I,” “we,” and “it” that we call them the 4 quadrants, and we make them a foundation of the integral framework or IOS. (We arrive at “4” quadrants by subdividing “it” into singular “it” and plural “its.”) A few diagrams will help clarify the basic points.

![Figure 3. The Quadrants](image)

Figure 3 is a schematic of the 4 quadrants. It shows the “I” (the inside of the individual), the “it” (the outside of the individual), the “we” (the inside of the collective), and the “its” (the outside of the collective). In other words, the 4 quadrants—which are the 4 fundamental perspectives on any occasion (or the 4 basic ways of looking at
anything)—turn out to be fairly simple: they are the inside and the outside of the individual and the collective.

Figures 4 and 5 show a few of the details of the 4 quadrants. (Some of these are technical terms that needn’t be bothered with for this basic introduction; simply look at the diagrams and get a sense of the different types of items you might find in each of the quadrants.)

![Figure 4. Some Details of the Quadrants](image-url)
For example, in the **Upper-Left quadrant** (the interior of the individual), you find your own immediate thoughts, feelings, sensations, and so on (all described in 1st-person terms). But if you look at your individual being *from the outside*, in the terms not of subjective awareness but objective science, you find neurotransmitters, a limbic system, the neocortex, complex molecular structures, cells, organ systems, DNA, and so
on—all described in 3rd-person objective terms (“it” and “its”). The **Upper-Right quadrant** is therefore what any _individual_ event looks like _from the outside_. This especially includes its physical behavior; its material components; its matter and energy; and its concrete body—for all those are items that can be referred to in some sort of objective, **3rd-person**, or “it” fashion.

That is what you or your organism looks like from the outside, in an objective-it stance, made of matter and energy and objects; whereas from the inside, you find not neurotransmitters but feelings, not limbic systems but intense desires, not a neocortex but inward visions, not matter-energy but consciousness, all described in **1st-person immediateness**. Which of those views is right? Both of them, according to the integral approach. They are two different views of the same occasion, namely you. The problems start when you try to deny or dismiss either of those perspectives. All 4 quadrants need to be included in any integral view.

The connections continue. Notice that every “I” is in relationship with other I’s, which means that every “I” is a member of numerous we’s. These “we’s” represent not just _individual_ but _group_ (or _collective_) consciousness, not just subjective but intersubjective awareness—or _culture_ in the broadest sense. This is indicated in the Lower-Left quadrant. Likewise, every “we” has an exterior, or what it looks like from the outside, and this is the Lower-Right quadrant. The Lower Left is often called the _cultural_ dimension (or the inside awareness of the group—its worldview, its shared values, shared feelings, and so forth), and the Lower Right the _social_ dimension (or the exterior forms and behaviors of the group, which are studied by 3rd-person sciences such as systems theory).
Again, the quadrants are simply the inside and the outside of the individual and the collective, and the point is that all 4 quadrants need to be included if we want to be as integral as possible.

We are now at a point where we can start to put all the integral pieces together: quadrants, levels, lines, states and types. Let’s start with levels or stages.

All 4 quadrants show growth, development, or evolution. That is, they all show some sort of stages or levels of development, not as rigid rungs in a ladder but as fluid and flowing waves of unfolding. This happens everywhere in the natural world, just as an oak unfolds from an acorn through stages of growth and development, or a Siberian tiger grows from a fertilized egg to an adult organism in well-defined stages of growth and development. Likewise with humans in certain important ways. We have already seen several of these stages as they apply to humans. In the Upper Left or “I,” for example, the self unfolds from egocentric to ethnocentric to worldcentric, or body to mind to spirit. In the Upper Right, felt energy phenomenologically expands from gross to subtle to causal. In the Lower Left, the “we” expands from egocentric (“me”) to ethnocentric (“us”) to worldcentric (“all of us”). This expansion of group awareness allows social systems—in the Lower Right—to expand from simple groups to more complex systems like nations and eventually even to global systems. These 3 simple stages in each of the quadrants are represented in figure 6.
Let’s move from levels to lines. Developmental lines occur in all 4 quadrants, but because we are focusing on personal development, we can look at how some of these lines appear in the Upper-Left quadrant. As we saw, there are over a dozen different multiple intelligences or developmental lines. Some of the more important include:

- the cognitive line (or awareness of what is)
- the moral line (awareness of what should be)
- the emotional or affective line (the full spectrum of emotions)
- the interpersonal line (how I socially relate to others)
- the needs line (such as Maslow’s needs hierarchy)
- the **self-identity** line (or “who am I?,” such as Loevinger’s ego development)
- the **aesthetic** line (or the line of self-expression, beauty, art, and felt meaning)
- the **psychosexual** line, which in its broadest sense means the entire spectrum of Eros (gross to subtle to causal)
- the **spiritual** line (where “spirit” is viewed not just as Ground, and not just as the highest stage, but as its own line of unfolding)
- the **values** line (or what a person considers most important, a line studied by Clare Graves and made popular by Spiral Dynamics)

All of those developmental lines can move through the basic stages or levels. All of them can be included in the psychograph. If we use stage or level conceptions such as Robert Kegan’s, Jane Loevinger’s, or Clare Graves’s, then we would have 5, 8, or even more levels of development with which we could follow the natural unfolding of developmental lines or streams. Again, it is not a matter of which of them is right or wrong; it is a matter of how much “granularity” or “complexity” you need to more adequately understand a given situation.

We already gave one diagram of a psychograph (fig. 1). Figure 7 is another, taken from a Notre Dame business school presentation that uses the AQAL model in business.
As noted, all of the quadrants have developmental lines. We just focused on those in the Upper Left. In the Upper-Right quadrant, when it comes to humans, one of the most important is the bodily matter-energy line, which runs, as we saw, from gross energy to subtle energy to causal energy. As a developmental sequence, this refers to the permanent acquisition of a capacity to consciously master these energetic components of your being (otherwise, they appear merely as states). The Upper-Right quadrant also refers to all of the exterior behavior, actions, and movements of my objective body (gross, subtle, or causal).

In the Lower-Left quadrant, cultural development itself often unfolds in waves, moving from what the pioneering genius Jean Gebser called archaic to magic to mythic to mental to integral and higher. In the Lower-Right quadrant, systems theory
investigates the collective social systems that evolve (and that, in humans, include stages such as foraging to agrarian to industrial to informational systems). In figure 6, we simplified this to “group, nation, and global,” but the general idea is simply that of unfolding levels of greater social complexity that are integrated into wider systems.

Again, for this simple overview, details are not as important as a general grasp of the unfolding or flowering nature of all 4 quadrants, which can include expanding spheres of consciousness, care, culture, and nature. In short, the I and the we and it can evolve. Self and culture and nature can all develop and evolve.

We can now quickly finish with the other components. States occur in all quadrants (from weather states to states of consciousness). We focused on states of consciousness in the Upper Left (waking, dreaming, sleeping), and on energetic states in the Upper Right (gross, subtle, causal). Of course, if any of those become permanent acquisitions, they have become stages, not states.

There are types in all of the quadrants, too, but we focused on masculine and feminine types as they appear in individuals. The masculine principle identifies more with agency and the feminine identifies more with communion, but the point is that every person has both of these components. Finally, as was saw, there is an unhealthy type of masculine and feminine at all available stages—sick boy and sick girl at all stages.

Seem complicated? In a sense it is. But in another sense, the extraordinary complexity of humans and their relation to the universe can be simplified enormously by touching bases with the quadrants (the fact that every event can be looked at as an I, we, or it); developmental lines (or multiple intelligences), all of which move through
developmental levels (from body to mind to spirit); with states and types at each of those levels.

That Integral Model—“all quadrants, all levels, all lines, all states, all types”—is the simplest model that can handle all of the truly essential items. We sometimes shorten all of that to simply “all quadrants, all levels”—or AQAL—where the quadrants are, for example, self, culture, and nature, and the levels are body, mind, and spirit, so we say that the Integral Approach involves the cultivation of body, mind, and spirit in self, culture, and nature. The simplest version of this is shown in figure 6, and if you have a general understanding of that diagram, the rest is fairly easy.

IOS Apps

Let’s conclude what might be called this “Introduction to IOS Basic” by giving a few quick examples of its applications, or “apps”—in medicine, business, spirituality, and ecology.

Integral Medicine

Nowhere is the Integral Model more immediately applicable than in medicine, and it is being increasingly adopted by health-care practitioners around the world. A quick trip through the quadrants will show why the Integral Model can be helpful.

Orthodox or conventional medicine is a classic Upper-Right quadrant approach. It deals almost entirely with the physical organism using physical interventions: surgery,
drugs, medication, and behavioral modification. Orthodox medicine believes essentially in the physical causes of physical illness, and therefore prescribes mostly physical interventions. But the Integral Model claims that every physical event (UR) has at least 4 dimensions (the quadrants), and thus even physical illness must be looked at from all 4 quadrants (not to mention levels, which we will address later). The integral model does not claim the Upper-Right quadrant is not important, only that it is, as it were, only one-fourth of the story.

The recent explosion of interest in alternative care—not to mention such disciplines as psychoneuroimmunology—has made it quite clear that the person’s *interior states* (their emotions, psychological attitude, imagery, and intentions) play a crucial role in both the *cause* and the *cure* of even physical illness. In other words, the **Upper-Left quadrant** is a key ingredient in any comprehensive medical care. Visualization, affirmation, and conscious use of imagery have empirically been shown to play a significant role in the management of most illnesses, and outcomes have been shown to depend on emotional states and mental outlook.

But as important as those subjective factors are, individual consciousness does not exist in a vacuum; it exists inextricably embedded in shared cultural values, beliefs, and worldviews. How a culture (LL) views a particular illness—with care and compassion or derision and scorn—can have a profound impact on how an individual copes with that illness (UL), which can directly affect the course of the physical illness itself (UR). The **Lower-Left quadrant** includes all of the enormous number of *intersubjective* factors that are crucial in any human interaction—such as the shared communication between doctor and patient; the attitudes of family and friends and how they are conveyed to the patient;
the cultural acceptance (or derogation) of the particular illness (e.g., AIDS); and the very values of the culture that the illness itself threatens. All of those factors are to some degree causative in any physical illness and cure (simply because every occasion has 4 quadrants).

Of course, in practice, this quadrant needs to be limited to those factors that can be effectively engaged—perhaps doctor and patient communication skills, family and friends support groups, and a general understanding of cultural judgments and their effects on illness. Studies consistently show, for example, that cancer patients in support groups live longer than those without similar cultural support. Some of the more relevant factors from the Lower-Left quadrant are thus crucial in any comprehensive medical care.

The Lower-Right quadrant concerns all those material, economic, and social factors that are almost never counted as part of the disease entity, but in fact—like every other quadrant—are causative in both disease and cure. A social system that cannot deliver food will kill you (as famine-wrecked countries demonstrate daily, alas). In the real world, where every entity has all 4 quadrants, a virus in the UR quadrant might be the focal issue, but without a social system (LR) that can deliver treatment, you will die. That is not a separate issue; it is central to the issue, because all occasions have 4 quadrants. The Lower-Right quadrant includes factors such as economics, insurance, social delivery systems, and even things as simple as how a hospital room is physically laid out (does it allow ease of movement, access to visitors, etc.?)—not to mention items like environmental toxins. The foregoing items refer to the “all-quadrant” aspect of the cause and management of illness. The “all-level” part refers to the fact that individuals have—at least—physical, emotional, mental, and spiritual levels in each of those
quadrants (see fig. 6). Some illnesses have largely physical causes and physical cures (get hit by a bus, break your leg). But most illnesses have causes and cures that include emotional, mental, and spiritual components. Literally hundreds of researchers from around the world have added immeasurably to our understanding of the “multi-level” nature of disease and cure (including invaluable additions from the great wisdom traditions, shamanic to Tibetan). The point is simply that by adding these levels to the quadrants, a much more comprehensive—and effective—medical model begins to emerge.

In short, a truly effective and comprehensive medical plan would be all-quadrant, all-level: the idea is simply that each quadrant or dimension (fig. 3)—I, we, and it—has physical, emotional, mental, and spiritual levels or waves (fig. 6), and a truly integral treatment would take all of these realities into account. Not only is this type of integral treatment more effective, it is for that reason more cost-efficient—which is why even organizational medicine is looking at it more closely.

(If you’re more interested in this approach, see the Center for Integral Medicine at www.IntegralUniversity.org.)

**Integral Business**

Applications of the Integral Model have recently exploded in business, because the applications are so immediate and obvious. The quadrants give the 4 “environments” or “markets” in which a product must survive, and the levels give the types of values that will be both producing and buying the product. Research into the values hierarchy—such
as Maslow’s and Graves’s (e.g., Spiral Dynamics), which have already had an enormous influence on business—can be combined with the quadrants (which show how these levels of values appear in the 4 different environments)—to give a truly comprehensive map of the marketplace (which covers both traditional markets and cybermarkets).

Moreover, *Integral Leadership* training programs, based on an integral or AQAL model, have also begun to flourish. There are today 4 major theories of business management (Theory X, which stresses individual behavior; Theory Y, which focuses on psychological understanding; cultural management, which stresses organizational culture; and systems management, which emphasizes the social system and its governance). Those 4 management theories are in fact the 4 quadrants, and an Integral Approach would necessarily include all 4 approaches. Add levels and lines, and an incredibly rich and sophisticated model of leadership emerges, which is easily the most comprehensive available today.

(If you would like to pursue this approach, please see the Center for Integral Leadership and Business at [www.IntegralUniversity.org](http://www.IntegralUniversity.org).)

**Relational and Socially Engaged Spirituality**

The major implication of an AQAL approach to spirituality is that physical, emotional, mental, and spiritual levels of being should be simultaneously exercised in self, culture, and nature (i.e., in the I, we, and it domains). There are many variations on this theme, ranging from socially engaged spirituality to relationships as spiritual path, and we include all of those important contributions in Integral Life Practice (see below). The
implications of an Integral Spirituality (www.IntegralSpiritualCenter.org) are profound and widespread, and just beginning to have an impact.

**Integral Ecology**

Integral or AQAL ecology has already been pioneered by several associates at Integral Institute, and promises to revolutionize both how we think about environmental issues and how we pragmatically address and remedy them (See the Center for Integral Ecology at www.IntegralUniversity.org).

The basic idea is simple: anything less than an integral or comprehensive approach to environmental issues is doomed to failure. Both the interior (or Left-Hand) and the exterior (or Right-Hand) quadrants need to be taken into account. Exterior environmental sustainability is clearly needed; but without a growth and development in the interior domains to worldcentric levels of values and consciousness, the environment remains gravely at risk. Those focusing only on exterior solutions are contributing to the problem. Self, culture, and nature must be liberated together or not at all. How to do so is the focus of Integral Ecology.

**Integral Life Practice**

The foregoing “IOS apps” tend to focus on the some of the theoretical aspects of the Integral Approach. But what about the experiential and practical aspects of my own awareness, growth, transformation, and awakening?
Any map of the human being has an explicit or implicit practical approach, and the practical, 1st-person, experiential dimension of the Integral Approach is called **Integral Life Practice**, or **ILP**.

The basic nature of ILP is simple. I’ll give a schematic summary: if you take body, mind, and spirit (as levels), and self, culture, and nature (as quadrants), and then you combine them, you get 9 possible areas of growth and awakening. Integral Life Practice is the first approach to cross-combine all of those for the most effective personal transformation possible ([www.MyILP.com](http://www.MyILP.com)).

To give a slightly more expanded example: if you look at figure 6, you will notice that 3 levels in 4 quadrants actually gives you 12 zones. Integral Life Practice has created practical exercises for growth in all 12 zones, a radically unique and historically unprecedented approach to growth, development, and awakening.

**Summary and Conclusion**

Those are a few of the “applications” or apps of the Integral Model. We can now conclude with a brief summary of the main points of the model itself.

**AQAL** is short for “**all quadrants, all levels**”—which itself is short for “all quadrants, all levels, all lines, all states, all types,” which are simply 5 of the most basic elements that need to be included in any truly integral or comprehensive approach.

When AQAL is used as a guiding framework to organize or understand any activity, we also call it an **Integral Operating System**, or simply **IOS**. More advanced forms of IOS are available, but IOS Basic has all of the essential elements (quadrants,
levels, lines, states, types) to get anybody started toward a more comprehensive, inclusive, and effective approach.

Of course, AQAL or IOS itself is just a map, nothing more. It is not the territory. But, as far as we can tell, it is the most comprehensive map that we possess at this time. Moreover—and this is important—the Integral Map itself insists that we go to the real territory and not get caught in mere words, ideas, or concepts. Remember that the quadrants are just a version of 1st-, 2nd-, and 3rd-person realities? Well, the Integral Map and IOS are just 3rd-person words, they are abstractions, a series of “it” signs and symbols. But those 3rd-person words insist that we also include 1st-person direct feelings, experiences, and consciousness as well as 2nd-person dialogue, contact, and interpersonal care. The Integral Map itself says: this map is just a 3rd-person map, so don’t forget the other important realities, all of which should be included in any comprehensive approach.

That’s where things like Integral Life Practice come in. When AQAL or IOS is used for real-life personal growth and development, we speak of Integral Life Practice, which appears to be the most comprehensive and therefore effective path of transformation available.

Here’s one other important conclusion. IOS is a neutral framework; it does not tell you what to think, or force any particular ideologies on you, or coerce your awareness in any fashion. For example, to say that human beings have waking, dreaming, and deep sleep states is not to say what you should think while awake or what you should see while dreaming. It simply says, if you want to be comprehensive, be sure and include waking and dreaming and formless states.
Likewise, to say that all occasions have 4 quadrants—or simply “I,” “we,” and “it” dimensions—is not to say what the “I” should do, or the “we” should do, or the “it” should do. It simply says, if you are trying to include all the important possibilities, be sure to include 1st- and 2nd- and 3rd-person perspectives, because they are present in all major languages the world over.

Precisely because IOS is a neutral framework, it can be used to bring more clarity, care, and comprehensiveness to virtually any situation, making success much more likely, whether that success be measured in terms of personal transformation, social change, excellence in business, care for others, or simple happiness in life.

But perhaps most important of all, because IOS can be used by any discipline—from medicine to art to business to spirituality to politics to ecology—then we can, for the first time in history, begin an extensive and fruitful dialogue between all of these disciplines. A person using IOS in business can talk easily and effectively with a person using IOS in poetry, dance, or the arts, simply because they now have a common language—or a common operating system—with which to communicate. When you are using IOS, not only can you run hundreds of different “software” programs on it, all of those programs can now communicate with each other and learn from each other, thus advancing an evolutionary unfolding to even greater dimensions of being and knowing and acting.

This is why thousands of scholars and teachers the world over came together and started Integral University, the world’s first integral learning community. Because all of the various human activities, previously separated by incommensurate jargon and terminologies, can in fact begin to effectively communicate with each other by running
an Integral Operating System, each of those disciplines can begin to converse with, and learn from, the others. This has never effectively happened anywhere in history, which is why, indeed, the Integral adventure is about to begin.

However we look at it, it all comes down to a few simple points. In your own growth and development, you have the capacity to take self, culture, and nature to increasingly higher, wider, and deeper modes of being, expanding from an isolated identity of “me” to a fuller identity of “us” to an even deeper identity with “all of us”—with all sentient beings everywhere—as your own capacity for Truth and Goodness and Beauty deepens and expands. Ever-greater consciousness with an ever-wider embrace, which is realized in self, embodied in nature, and expressed in culture.

Thus, to cultivate body, mind, and spirit in self, culture, and nature. This is the extraordinary aim and goal of the Integral Approach, and we would love to have you join us in this exciting adventure.
